Practical Statistics PD

Manchester

27th January 2022

Overview

This course aims to provide simple practical and problem solving ideas that can be used with students studying statistics as part of their A level maths, as well as a range of concept questions for promoting discussion and testing student understanding. All the ideas used will be ones that teachers can take away and replicate with a minimum of equipment and resources. All delegates will be encouraged to carry out a range of activities.

Aims

- Gain a number of ideas that can be used in the A level statistics classroom for introducing concepts using practical or problem solving approaches.
- Network and share ideas with fellow teachers of statistics in A level
- Increase delegates' awareness of interesting and engaging methods for deepening students' conceptual understanding of the subject.

Who will benefit from attending?

Any current or prospective teacher of the statistics element A (or AS) level maths.

Content

Activities will include:

- Practical ideas for introducing probability and discrete random variables
- Active learning resources
- Modelling real life situations using hypothesis testing in an engaging way
- Real life data collection and activities for data presentation and hypothesis testing

Eligibility

Any state school teachers
